

Navy Medical Treatment Facility Representatives:

The DoD and VA have developed a videotape program of self-study on implementation of the diabetes mellitus clinical practice guideline.

Target Audience: The target audience for this training includes primary care providers, healthcare team members responsible for caring for patients with diabetes, clinical practice guideline champions, and QM staff.

Continuing Education Credit: The VA Employee Education System designates this educational activity for a maximum of 2 hours in category 1 towards the AMA Physician's Recognition Award and 2.4 contact hours by the American Nurses Credentialing Center's Commission on Accreditation. A Certificate of Attendance will be awarded for 2.0 hours to all other participants.

Materials: This kit contains the videotape training, a course information booklet, the course post-test, answer sheets, and course evaluation materials.

Process: Contact Mr. Heaston of the NEHC Population Health Staff at: <http://www-nehc.med.navy.mil/hp/pophealth/PopStaff.htm> to request a training kit and enclose in your e-mail an address to which FedEx will deliver. It will be your responsibility to forward the scan forms for the post-test directly to the VA as directed in the instructions. Please do not return them to NEHC. It is not required for your facility to implement the guideline in order to conduct this training.

The complete Diabetes Mellitus Clinical Practice Guideline Implementation Toolkit will be provided to your facility at no charge while supplies last. The request form can be found at the DoD CPG website: <http://www.cs.amedd.army.mil/qmo/pguide.htm>
